Career Objective

Results-driven Software Development Engineer with hands-on expertise across full-stack Java architectures, cloud-native AWS infrastructure systems. Combines algorithmic rigor with modern DevOps practices (Docker, CI/CD, observability) to engineer fault-tolerant, scalable backends and deliver high-impact, production-ready software solutions

Education

Kamaraj College of Engineering and Technology — **Virudhunagar, Tamil Nadu**
Bachelor of Engineering in Computer Science and Engineering – ***CGPA: 8.22*** — *2022 – 2026*

Rajan Matriculation Higher Secondary School — **Madurai, Tamil Nadu**
Higher Secondary Certificate (HSC): ***82.3%*** | *Secondary School (SSLC):* ***87.2%*** — *2020 – 2022*

Technical Skills

Languages: Java, Python, SQL, HTML, CSS
Frameworks & Libraries: Spring Boot, REST APIs
Cloud & DevOps: AWS (EC2, S3, RDS, SNS, IAM), Docker, GitHub Actions, Git/GitHub, Prometheus, Grafana, Loki
Design & Tools: Figma, UX Design
Core Competencies: Data Structures & Algorithms, Problem Solving, Critical Thinking, Agile Methodologies

Work Experience

Native Sparrow Software Solutions — **Dec 2023**
Full Stack Development Intern — *Java, Web Development*

- Engineered "Task Master", a Java full-stack task management web application to streamline daily workflows.
- Implemented robust CRUD operations for task creation, editing, status tracking, and persistent state management.
- Structured modular backend business logic to ensure reliable data handling, validation, and responsive user experience.

Phoenix Softech — **May 2025**
Artificial Intelligence Intern — *Python, Natural Language Processing*

- Developed an AI "Career Guidance" chatbot using Python and NLP to assist high school students in academic planning.
- Integrated text summarization algorithms to condense curriculum syllabi and recommend customized study pathways.
- Designed intent recognition pipelines to accurately parse student queries and provide targeted academic counseling.

Technical Projects

AI Education Mentor for Student Retention — *Python, NLP, Predictive Analytics*

- Architected an AI student mentoring platform combining NLP and predictive modeling to identify at-risk learners.
- Applied predictive analytics on student engagement indicators to generate tailored academic intervention plans.
- Built an interactive conversational chatbot utilizing automated text summarization for on-demand academic assistance.

Voteguard: AI + Blockchain Biometric Voting System — *Blockchain, Smart Contracts, AI*

- Developed a secure voting platform combining decentralized Blockchain architecture with facial and fingerprint verification.
- Prevented duplicate voting and impersonation by enforcing strict one-person-one-vote validation using AI identity checks.
- Authored and deployed smart contracts to guarantee immutable ballot records and real-time cryptographic tallying.

AI-Assisted CI/CD and Application Monitoring Platform — *Docker, GitHub Actions, Prometheus, Grafana*

- Built an automated CI/CD pipeline using Docker containerization and GitHub Actions to streamline continuous build and deployment.
- Implemented full-stack observability with Prometheus, Grafana, and Loki for real-time telemetry and centralized logging.
- Integrated AI anomaly detection into the pipeline to analyze telemetry streams and accelerate incident root-cause triage.

Certifications

- **AWS Certified Cloud Practitioner** – Amazon Web Services
- **AWS Academy Graduate – Cloud Architecting** (Training Badge) – Amazon Web Services
- **Java Programming Fundamentals** – Infosys Springboard
- **SQL and Relational Databases 101** – IBM
- **Advanced UX Techniques** – Infosys Springboard
